

Pavan Narendra Peela

Software Engineer (React • Next.js • Node.js)

📞 +91-9381974822 ✉ pavannarendra2002@gmail.com 📍 Hyderabad, India
LinkedIn | GitHub

Summary

Full Stack Developer with **2 years** of experience building web applications using React, Next.js, and Node.js. Built a real-time messaging system handling **1M+ messages** with **sub-500ms** response times through Redis caching and pagination. Experienced in multi-tenant architecture, REST API design, and containerized deployments with Docker on AWS.

Professional Experience

Software Engineer
VECTORSOFT

Jan 2025 – Present
Hyderabad, India

- Built a real-time internal messaging system from scratch for a healthcare platform — implemented **Redis caching** and pagination that **reduced fetch times from 2–3s to under 500ms** and scaled capacity from 5,000 to **1M+ messages**, achieving **40% overall performance improvement**.
- Developed REST APIs using **Node.js** for a multi-tenant patient management application serving **5 clinics** and **200+ users** across multiple roles (doctors, clinicians, billers, front desk).
- Implemented **multi-tenant architecture** with isolated databases per organization, tenant-specific feature configurations, and role-based access control.
- Built and maintained frontend components using **React, Next.js, and TypeScript**, focusing on reusable UI patterns and responsive design.
- Wrote unit tests with **Jest** and end-to-end tests with **Playwright** for critical chat workflows; containerized services using **Docker and Docker Compose**.
- Designed **MongoDB** document schemas with indexing strategies and optimized query performance for high-volume data access patterns.

Software Engineer
FLYING FOX LABS

Jul 2024 – Jan 2025
Hyderabad, India

- Integrated **Keycloak SSO** with OAuth 2.0 authorization code flow, enabling single sign-on and automated role assignments across multiple client applications.
- Deployed and managed **Helm charts** (n8n, Bedrock, WordPress), streamlining internal infrastructure provisioning and reducing manual setup overhead.
- Set up **CI/CD pipelines** with automated build, lint, and deployment stages across dev, staging, and production environments.
- Reviewed pull requests across the team and improved shared error handling and logging patterns using **Pino**, reducing production debugging time.

Projects

Multiplayer Real-time Chess Game
Next.js, WebSockets, MongoDB, Redis

2024

- Built a working multiplayer chess platform with **WebSocket**-based real-time communication, enabling instant move synchronization between concurrent players.
- Implemented server-side **move validation** to enforce game rules, with **MongoDB** for persistent game state and **Redis** for active session management.
- Handled player disconnections with reconnection logic and game state recovery from database.

Technical Skills

Languages: JavaScript, TypeScript, Java, C++

Frontend: React, Next.js, Tailwind CSS **Backend:** Node.js, REST APIs, WebSockets

DevOps: AWS (EC2, S3, Elastic Beanstalk), Docker, Helm, CI/CD

Education

KKR & KSR Institute of Technology and Sciences
Bachelor of Technology in Computer Science and Engineering
CGPA: 7.57

2020 – 2024
